

DVD Face Printing Template

Minimum Inner Printing Size Diameter

A few hints:

- Take this PDF into either Adobe Photoshop™ or Illustrator™ and use it as a template.
- Make sure your art extends past the 120mm exterior edge by 4-5 mm. This is your exterior bleed.
- Make sure your art also fills the interior hole completely. The 23mm round section will be knocked out of your art when printed, so don't put anything important there.
- Save this template as an PDF and email to graphics@midsouthdvd.com. You can also upload to our FTP server if it is over 8 Mbs. Call or email the contact info above for details.
- If you send a JPEG or TIFF file, layout your art with the template, then delete the template before saving as a JPEG or TIFF. We can't print your face art with the template embedded.
